PROFESSIONAL SUMMARY

Senior Backend Engineer with **5+ years** of experience building scalable backend systems, payment platforms, and event-driven microservices using **Python, Node.js, TypeScript, PostgreSQL, Redis, Kafka, and AWS**. Delivered multiple **full backend** services across SaaS, AI, payments, and analytics domains for global and enterprise clients. Designed and delivered payment orchestration integrating **5+ payment providers**, reduced PostgreSQL query latency by **80%+**, and implemented Redis caching cutting API response times by **50%**. Recognised as **Employee of the Quarter** at both Citrusbug Technolabs and Bacancy Technology and **Employee of the year for excellent performance** at Citrusbug. Strong expertise in distributed systems, database optimisation, asynchronous processing, and production reliability.

TECHNICAL SKILLS

- **Primary Languages & Frameworks:** Python, Django, FastAPI, Flask
- **Secondary Languages & Frameworks:** Node.js, TypeScript, Express.js, NestJS, JavaScript ES6+, PHP, Laravel
- **Databases & Caching:** PostgreSQL, Redis, MySQL, MongoDB, Query Optimisation, Zero-Downtime Migrations
- **Infrastructure & DevOps:** Apache Kafka, AWS (S3, SNS, Lambda), Docker, GitHub Actions, WebSocket, REST API Design
- **System Design:** Distributed Systems, Microservices Architecture, Event-Driven Design, Pub/Sub Patterns, Payment Integration, API Performance Optimisation
- **AI & Testing:** OpenAI, Deepgram, Cursor, Claude, Jest - **85%+ automated test coverage** across critical workflows

PROFESSIONAL EXPERIENCE

Bacancy Technology - Senior Backend Engineer

March 2025 – Present | Ahmedabad

Domain: Payments, Inventory Management, Precious Metals Trading (UK Client)

- Built payment orchestration services integrating **5+ payment providers** using PostgreSQL, Redis, and Kafka - enabling reliable transaction processing across multiple payment channels for a UK-based precious metals trading platform.
- Redesigned a real-time pricing distribution system using WebSockets and Redis - reduced redundant API traffic and improved data consistency across **concurrent user sessions**, delivering **real-time pricing updates** without polling.
- Executed zero-downtime migration of **10,000+ user records**, transactions, and inventory data - maintaining full production availability throughout.
- Improved database performance through indexing, query optimisation, and schema improvements - reducing query latency by **up to 40%**.
- Designed a centralised event-driven notification platform supporting inventory, orders, payments, and customer onboarding - with real-time delivery via WebSockets, read/unread state management, and delivery status tracking.
- Designed payment orchestration as an admin-configurable system - client switches between **multiple payment gateways** with **zero engineering intervention**, reducing feature change lead time by **~70%**.

Citrusbug Technolabs - Backend Engineer

September 2021 – March 2025 | Ahmedabad | 3.5 Years

Domain: SaaS, AI, Analytics, Marketing Automation (Global Clients)

- Built **3–5 full backend services** using Django and FastAPI across SaaS, AI, and analytics platforms - delivering **production-grade APIs** for global clients alongside Node.js-based systems.
- Developed real-time voice processing workflows and AI-powered automation features using **Python with Deepgram and OpenAI integrations** - enabling AI-driven transcription, summarisation, and automation pipelines.
- Reduced PostgreSQL query latency by **80%+** through execution plan analysis, indexing strategies, and query rewriting - one of the highest-impact performance improvements delivered across the engineering team.
- Implemented Redis caching reducing API response times by **50%** for frequently accessed workloads across multiple client platforms.
- Implemented event-driven architectures using Apache Kafka - supporting asynchronous processing across marketing and analytics platforms serving global clients.
- Integrated payment providers including Stripe alongside Meta, WhatsApp Business API, Twitter/X, and AWS services - supporting secure payment processing and external platform integrations.
- Achieved **85%+ automated test coverage** using Jest across critical business workflows - establishing testing standards adopted across backend teams.

- Built asynchronous job processing systems with retry mechanisms and fault-tolerant processing patterns - improving reliability of background workloads across **3+ production platforms**.

ARK Infosoft - Data Analyst

June 2020 – July 2021 | Ahmedabad | 1 Year

- Built **Python-based ETL pipelines** processing **100K+ records monthly** - end-to-end ownership of data ingestion, transformation, and loading with comprehensive error handling and data integrity validation.
- Automated reporting workflows - reducing manual data processing effort by **~40%** across analytics teams.

KEY PROJECTS

Precious Metals Trading Platform - Bacancy Technology | March 2025 – Present

Stack: Node.js · PostgreSQL · Redis · Kafka · WebSockets · AWS

- Built schema-flexible admin system allowing the client to define custom fields, column types, and dropdown configurations without code changes - reducing client dependency on engineering for **routine configuration tasks**, cutting engineering requests by **~60%**.
- Designed configurable payment orchestration - client switches between multiple payment gateways without engineering intervention, supporting **zero-downtime payment provider changes**.

Airyis - AI Marketing Automation Platform - Citrusbug Technolabs | Feb 2024 – March 2025

Stack: Python · FastAPI · Kafka · AWS SES · Facebook · WhatsApp · Twitter APIs

- Built Kafka-based campaign event pipelines processing **multi-channel campaigns** across email, Facebook, WhatsApp, and Twitter from a single unified dispatch layer - reducing campaign setup time by **~50%**.
- Solved organisation email authentication by implementing custom AWS SES DKIM integration and secure token-based verification flow.

Multisports booking system - Citrusbug Technolabs | Dec 2022 – October 2023

Stack: Python · FastAPI · Kafka · AWS SES · SQS · Stripe

- Developed backend services for a **multi-type sports booking** platform supporting court bookings, membership management, event registrations, and daily game scheduling for padel, tennis, and other sports.
- Integrated **Stripe payment system** enabling membership renewals, split payments among players, and secure transaction processing for court and event bookings.

AWARDS & RECOGNITION

- **Employee of the Quarter - Bacancy Technology (Q3 2025)**: Recognised for delivering high-impact backend systems and a new payment orchestration platform while maintaining the existing production platform simultaneously.
- **Technical Excellence Spot Award - Bacancy Technology (Q2 2025)**: Awarded for diagnosing and resolving critical performance issues on GoldBank platform enabling the platform to handle production load while the new system was being built in parallel.
- **Employee of the Quarter - Citrusbug Technolabs (Q4 2023)**: Recognised for independently delivering critical backend systems and executing zero-downtime database migration on an aggressive timeline without senior oversight.
- **Employee of the Year for Excellence - Citrusbug Technolabs (2024)**: Recognised for consistent high-impact delivery and technical excellence across backend and AI-driven projects, with end-to-end ownership and leadership of integration work from start to finish.

EDUCATION

B.E. Computer Engineering | Gujarat Technological University | CGPA 8.4 | 2018–2022

LANGUAGES

English (Fluent) | Hindi (Native) | Gujarati (Native)
